

Data Sheet

Hand Operated Cutting Block PP-HP-70/V

Handy device to prepare the punch-cutting for the Z-splice of the belt material.

The belt material is cut by striking with a plastics hammer against the top of the blade holder.

CAUTION!

Only use a **blow-back proof soft-head hammer** in other respects there will be damages/distortions on the metal!

Due to the thin cut of the blade, the hand knife is not only suited for transport belts, but also for drive belts of the A- and the E-series.

The Z-contour must be drawn onto the belt material before.

Hand operated cutting block
PP-HP-70/V
