Punching Press for Z-Splices and Z-Stepped Overlap Splices PP-ZPB-V/300 - 1500

Punching presses of the PP-ZPB-V/300 – 1500 type are used to prepare Z-splices and Z-stepped overlap splices for conveyor belts that are from 300 to 1500 mm wide. The tool consists of a basic frame that is available in various widths and a removable punching head. Frame and punching head can be ordered separately and depending on your application requirements.

- Punching sets are not included in the delivery of the punching press and must be ordered separately!

Taken from the cut material, the ends of the belt are placed on and affixed to the punch cutting mat and then clamped with the hold-down bar. Turn the crank to move or shift the punching head and punching set to the next punching pitch. An automatic lock to set the punching pitch ensures exact punching.

The punching lever generates the pressure required. Because leverage is good, only little force is needed.
