**FORBO'S PLASTIC FASTENERS
FOR BELT REPLACEMENT IN NO TIME**
EASY, FAST, RELIABLE

FORBO'S PLASTIC FASTENERS: QUICK AND EASY TO FIT

■ No time lost due to belt replacements

They are also simple to install in hard-to-access areas:

- 1 Join the ends of the belt together
- 2 Insert a hinge pin
- 3 Melt the ends of the hinge pin to form heads

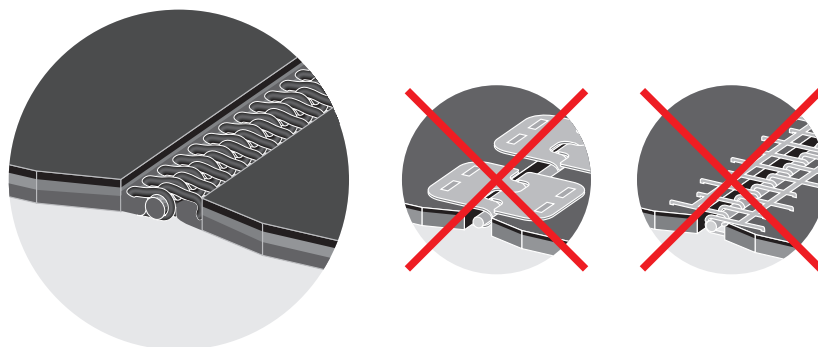

Time for installation and tracking: **15 minutes max.**

■ Little manpower required

A maximum of 2 people with no special skills

■ Economical

This is an economical option due to the time taken and the low fitting, equipment and personnel requirements

SAFE AND RELIABLE OPERATION

■ Superior reliability

In contrast to metal fasteners, plastic ones are melted over a large area with the belt and can't be torn out

■ Long service lives

Plastic fasteners are exceptionally durable, even when subjected to heavy loads

■ Product-friendly conveying/no risk of injury

Because they have rounded edges and no metal parts, there are no catch-points to cause injuries or damage plastic packaging

■ Equipment-friendly operation

Because only plastic components are used, mechanical damage of slider beds or rollers is prevented
