Linoleum **CARE SYSTEM**

With the help of the Linoleum Care System you can get rid of the time consuming basic cleaning while the floor is always clean and good-looking. The usage of the system is easy and carefree.

An initial cleaning for a new linoleum floor is done with Kiilto Tempus intensive cleaning agent, which removes all construction dust and dirt from the floors. Maintenance cleaning is done with only two products. Kiilto Deili takes care of the linoleum surface without changing its appearance. Kiilto Tempus is used periodically to ensure the cleanliness of the floor.

Kiilto Linoleum Care System is developed and tested in co-operation with the linoleum floor manufacturer Forbo Flooring Finland Oy.

INITIAL CLEANING

- 1 Use a single disc machine with a red or orange-green pad and **Kiilto Tempus** solution to wash the floor.
Apply the solution with the dosage of 10 ml / 1 l water into a small area at a time.
- 2 Carefully run the area through with the machine.
Vacuum with a wet vacuum cleaner.
- 3 Finish the floor by moist mopping or with a scrubber-dryer and clean water. Let the floor dry.
- 4 If there was construction dust on the floors, rinse the floor after the wash with **Kiilto Kasperi** solution with the dosage of 1 ml / 1 l water. Wet vacuum the solution. Let the floor dry.
- 5 Once the floor is dry, finish the floor by moist mopping or with a scrubber-dryer using **Kiilto Deili** with the dosage of 10 ml / 1 l water.

MAINTENANCE CLEANING

Clean the floor using the maintenance cleaning methods in use.

Mechanical method

Use a scrubber-dryer and a red or orange-green pad.

Use **Kiilto Deili** with the dosage of 10-20 ml / 1 l water.
At least every fifth time use **Kiilto Tempus** with the dosing 0,5 ml / 1 l water instead of **Kiilto Deili**. Use a red or orange-green pad.

Manual method

Moist mop the floor by using **Kiilto Deili**, dosage 10 ml / 1 l water. In manual methods use every third to fifth time **Kiilto Tempus** -solution with the dosage 2,5 ml / 1 l water instead of **Kiilto Deili**. Moist mop the floor. Dose **Kiilto Tempus** into the rinse-aid dispenser of a mop washing machine: 40 ml / 1 water (when the amount of the cleaning textile to be washed is 8 kg and the amount of the water used in the rinse by the machine is 16 l). Adjust the spin so that the cleaning textiles are moist after washing.

FLOOR CARE METHOD

If the floor is worn out, it can be treated by first cleaning the surface with **Kiilto Tempus**, dosage 10 ml / 1 l water. The clean and dry surface can then be moist mopped with **Kiilto Deili**, dosage 1:1 water. Use a single disc machine and a red or orange-green pad to finish the result.

KIILTO DEILI

Protective Agent for Linoleum

Takes care of the floor surface and makes it easier to clean. Leaves a matt, natural surface on the linoleum. Solution pH 8.

T7121.005 / 3 x 5 l

KIILTO TEMPUS

Cleaner for Linoleum

Effective and fragrance-free intensive cleaning agent. Safe for linoleum floors. Solution pH approx. 8,5.

T7120.005 / 3 x 5 l
