NOVO 30

RELIABLE CUTTING ACROSS THE FULL WIDTH

NOVO 30

RELIABLE CUTTING ACROSS THE FULL WIDTH

Wider. Stronger. More efficient. The new standards.

The Novo 30 HAP-HC+ black belt type (art. no. 906871) was custom-developed as a cutting belt for vacuum cutting systems. What makes it stand apart:

It's wider

Extra wide – without any longitudinal seam

At a production width of up to 3500 mm, there's no need for a costly longitudinal seam, which causes irregularities in terms of air permeability, or thickness.

It's stronger

Robust and incision resistant

Thanks to a special fiber blend and Latex impregnation, this is an exceptionally wear- and incision-resistant belt.

Due to the off-center tension member, the coating thickness of 2.6 mm enables generous cutting depth.

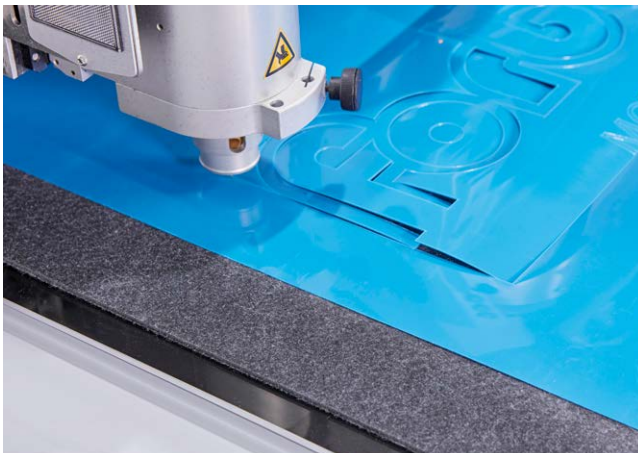

It's more efficient

Efficient and energy saving

Its exceptional air permeability ensures the product is affixed reliably and the energy consumption of the vacuum pump reduced.

The HC+ (highly conductive plus) version static build-up.

Novo 30 HAP-HC+ black – the uncompromising solution for superb cutting quality

Further benefits

- Generous cutting depth due to a coating thickness of 2.6 mm and a total thickness of 3 mm – enabled by the off-center tension member
- A longitudinal seam is possible in widths of > 3.5 meters
- The highly conductive plus HC+ version prevents static build-up
